

STADIUM FLOORING

NATURAL AND SYNTHETIC TURF PROTECTION

EVERBASE3 STADIUM TURF PROTECTION

Use EverBase3 DT and EverBase3 ST flooring to protect sensitive stadium turf from damage due to concerts, festivals and other on-field events.

Rounded edges on the underside of EverBlock flooring prevents bruising of natural turf and protects both natural and synthetic turf from getting cut or damaged.

With EverBlock flooring, thousands of visitors can walk, jump, and dance on the floor, while the turf below remains safe and ready for play.

EverBase3's unique cross ribbing distributes weight effectively across flooring sections, preventing soil compaction, maintaining proper moisture levels, and creating open areas that promote ventilation and water flow. The unique underside design creates a space for grass blades to remain protected from the type of wear and soil compaction that occurs under foot traffic.

EverBase3 is ideal for full field protection against pedestrian traffic, lightweight vehicles, equipment (such as speakers and mixing stations), and rolling concert cases. In addition to full field protection, use EverBase3 along sidelines, during play, to prevent wear to the turf and to provide a dry surface for athletes and staff.

EVERBASE3 DT (DRAINAGE TOP)

The drainage top tile allows for air, water, ventilation and limited light to penetrate, allowing natural grass to continue to grow while the floor is down. By creating a unique, shaded moisture canopy, EverBase3 DT prevents turf from drying out or burning on hot days.

Aeration holes allow for the flow of air, water, ventilation and light to the ground below. Cross ribbing helps to distribute weights and to minimize pressure points that could compact soil, grass or disturb roots.

EVERBASE3 ST (SOLID TOP)

The solid top tile protects synthetic turf against spills, dirt, and debris. It is a closed surface design, which minimizes the flow of liquids and debris through the floor, making it ideal for synthetic turf protection.

Larger quantities of water can still flow through the EverBase2 seams and under the flooring, providing a dry surface for concert-goers or event attendees. Drainage channels allow water to flow underneath the floor to prevent water build-up.

EASY TO INSTALL AND REMOVE

EverBase3 flooring transports in 3ft x 4ft panels, allowing for rapid installation by a minimal crew. It takes 20 people 5-6 hours to install a full stadium of flooring, meaning that your venue can be used for sports one day and a concert the next.

For efficient installation, simply transport pallets of EverBlock into proximity so that panels can then be placed into position where needed.

Using EverBase3, your venue can become a truly multi-purpose venue – hosting concerts, graduations, or other on-field events.

USE FOR:

- Concerts
- Graduations
- On-Field Trade Shows
- Monster Truck Events
- Parties & Corporate Events

EverBase3

MODULAR FLOORING

STADIUM FLOORING NATURAL AND SYNTHETIC TURF PROTECTION

EverBase® 3 (EBF3) is an 18" x 24" modular flooring tile that serves as a natural and synthetic turf protection flooring system. It can be used for a multitude of applications, such as events, concerts and graduations.

From large-scale events to small-scale functions, EverBase3 is ideal for protecting your expensive natural and synthetic turf surfaces against wear, tear, and damage from pedestrians and equipment.

EverBase3 is designed for rugged, everyday use, indoors and outdoors. Due to its larger module size, it provides greater rigidity than competing systems.

**Custom colors available with minimum orders.*

SOLID TOP (ST)

DRAINAGE TOP (DT)

**Edging ramps are also available.*

EVERBASE3 (EBF3) SPECIFICATIONS

Use EverBase3 DT (Drainage Top) and ST (Solid Top) flooring to protect sensitive stadium turf from damage due to concerts, festivals and other on-field events. Modules come pre-assembled in 3ft x 4ft sections for ease of transport and storage.

Material: EverBase3 is manufactured using high-impact polypropylene, co-polymer plastic, that contains impact modifiers for improved flex-modulus and long term durability.

Surface Dimension: 18" x 24" (3 Sq/ft of coverage per module)

Height: 1.1" Weight: 3.61 lbs per module

Color: Light Grey (EBF3-ST/DT) | Translucent (EBF3-DT)

UNDERSIDE
Durable Cross-Ribs

INSTALLATION

Modules connect in a matrix, creating a seamless floor that is both attractive and safe for large audiences. Once installed, your stadium is transformed from a sports facility to a concert or event venue.

Sections can be nudged by foot into their connection position and then snapped into place with a simple step. To remove sections, simply lift EBF3 sections up at a 45 degree angle, disengaging the panels for transport and further use.
